

QUICK-START GUIDE · 2026 EDITION

# Get Up & **Running** in Minutes

Everything you need to install, activate, and run your first stock scan — from unzipping to reading results.

## 1 Setup (one time only)

1. **Download your FinScan** — Click the green **Download Your FinScan** button in your purchase email. It serves a personalised **FinScan.zip** with your credentials already inside.
2. **Unzip the folder** — Extract the **FinScan** folder anywhere on your computer (e.g. Desktop).
3. **Double-click `run_finscan.bat`** — That's the only file you ever need to launch. *Ignore `finscan.exe` and `finscan.cfg`* — the bat file uses them automatically.

```
[license]
customer_id = YourName
access_key  = 2026051024XXXXXX
```

💡 **First-time launch on Windows:** Windows may show a "Windows protected your PC" popup the first time — that's normal for new apps. Click **More info** → **Run anyway**. **Still blocked?** Right-click **`run_finscan.bat`** → **Run as administrator**. If that also fails, email [finscan.ai@gmail.com](mailto:finscan.ai@gmail.com) — we'll help you out, or refund within 7 days, no questions asked.

## 2 Running a Scan

Double-click **`run_finscan.bat`** (the **only** file you ever launch) and pick an option from the menu:

- |                         |                                                                                                                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>[1] Single stock</b> | Prompts you for one ticker (e.g. NVDA) and runs a full analysis on it.                                                                                                                                                                                                                  |
| <b>[2] Group</b>        | Choose <b>[T]ickers</b> (enter up to 20 symbols, comma-separated) or <b>[C]ategory</b> (pick one or more of the 18 categories by number, e.g. 3,12,17). For category scans you also choose <b>[T]op Picks</b> (faster, hand-picked leaders) or <b>[F]ull Market</b> (broader universe). |
| <b>[3] Full market</b>  | Scans the full investable universe across all 18 categories. Takes 25–35 min on first run, 2–3 min after that (cached).                                                                                                                                                                 |
| <b>[Q] Quit</b>         | Exit without scanning.                                                                                                                                                                                                                                                                  |

📁 Results are saved automatically to the **output/** folder inside your FinScan directory.

### 3 Reading the Output

Open the **output/** folder after the scan completes:

|                              |                                                                               |
|------------------------------|-------------------------------------------------------------------------------|
| <b>finscan_YYYYMMDD.xlsx</b> | Main Excel output — two sheets: <b>Simple View</b> and <b>Full Analysis</b> . |
| <b>finscan_YYYYMMDD.csv</b>  | Raw data file, importable into any spreadsheet or tool.                       |
| <b>SYM_chart.png</b>         | Price chart for each of the top 10 stocks.                                    |

**Simple View** — designed for quick decisions:

|                         |                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------|
| <b>Score (0–100)</b>    | Overall composite score. Higher = stronger setup.                                     |
| <b>Verdict</b>          | Summary badge based on the score (see table below).                                   |
| <b>Valuation</b>        | Based on Forward P/E. From Very Cheap to Very Expensive.                              |
| <b>Growth</b>           | Revenue growth year-on-year. High Growth / Growing / Stable / Declining.              |
| <b>Profitability</b>    | Free Cash Flow or Net Margin. Highly Profitable to Loss-Making.                       |
| <b>Financial Health</b> | Debt/Equity ratio. Very Healthy / Healthy / Moderate Debt / High Debt.                |
| <b>Analyst Upside %</b> | $(\text{Analyst target price} - \text{current price}) \div \text{price} \times 100$ . |

### Understanding the Verdict

| VERDICT           | SCORE     | WHAT IT MEANS                              |
|-------------------|-----------|--------------------------------------------|
| <b>Strong Buy</b> | $\geq 75$ | Excellent across technicals + fundamentals |
| <b>Buy</b>        | $\geq 60$ | Strong setup, minor weaknesses             |
| <b>Watch</b>      | $\geq 45$ | Mixed signals — monitor closely            |
| <b>Caution</b>    | $\geq 30$ | More negatives than positives              |
| <b>Avoid</b>      | $< 30$    | Weak technicals and fundamentals           |

**Full Analysis** sheet — all the data: valuation ratios, margins, EPS, RSI, MACD, support/resistance levels and more.

### ⚠ Important — Buy or Strong Buy ≠ buy immediately

1. A **Strong Buy** or **Buy** verdict means the stock scores well on fundamentals and technicals — it does **not** mean you should buy it right now at any price.
2. **Always check the chart first.** If the price is sitting at or near **52-week highs**, making **higher highs** on low volume, or extended far above key moving averages (50-day, 200-day) — don't chase it.
3. Add it to your **watchlist** and wait for a **5–10% pullback**, a consolidation, or a retest of support before entering a position.
4. A great company at a **bad entry price** can still lose you money. **Timing matters as much as picking.**
5. FinScan is a screening tool — it surfaces opportunities. **Your job is to decide the entry.** Always do your own due diligence.

### 💡 Tips

|                             |                                                                                                                                          |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Repeat runs are fast</b> | Data is cached for 24 hours. Running again the same day takes only 2–3 minutes.                                                          |
| <b>Keep laptop awake</b>    | A full scan takes 25–35 min. Disable sleep/screensaver before running run_finscan.bat.                                                   |
| <b>Key expiry</b>           | If you see "Access Denied", your key has expired. Contact us at <a href="mailto:finscan.ai@gmail.com">finscan.ai@gmail.com</a> to renew. |
| <b>Internet required</b>    | FinScan pulls live data from multiple sources. A stable connection is needed.                                                            |
