

STEP 1 — Setup (one time only)

1. Unzip the folder	Extract the FinScan folder anywhere on your computer (e.g. Desktop).
2. Open finscan.cfg	Right-click finscan.cfg and open with Notepad.
3. Enter your details	Fill in the customer_id and access_key provided with your subscription.
4. Save and close	Save the file. You only need to do this once (or when your key is renewed).

Your finscan.cfg should look like this:

```
[license]
customer_id = YourName
access_key = 2026051024XXXXXX
```

STEP 2 — Running a Scan

run_finscan.bat	Full market scan — analyses all 18 categories. Takes 25-35 min on first run, 2-3 min after that (cached).
check_stock.bat	Single stock — prompts you to enter one ticker (e.g. NVDA).
check_group.bat	Group of stocks — enter multiple tickers separated by commas (e.g. AAPL,MSFT,TSLA).
check_category.bat	Category scan — shows the full list of categories and you pick one (e.g. EU Defense, Oil & Gas).

Double-click any .bat file to launch. Results are saved automatically to the output/ folder inside your FinScan folder.

STEP 3 — Reading the Output

Open the **output/** folder after the scan completes:

finscan_YYYYMMDD.xlsx	Main Excel output — two sheets: Simple View and Full Analysis.
finscan_YYYYMMDD.csv	Raw data file, importable into any spreadsheet or tool.
SYM_chart.png	Price chart for each of the top 10 stocks.

Simple View — designed for quick decisions:

Score (0-100)	Overall composite score. Higher = stronger setup.
Verdict	Summary badge based on the score (see table below).
Valuation	Based on Forward P/E. From Very Cheap to Very Expensive.
Growth	Revenue growth year-on-year. High Growth / Growing / Stable / Declining.
Profitability	Free Cash Flow or Net Margin. Highly Profitable to Loss-Making.
Financial Health	Debt/Equity ratio. Very Healthy / Healthy / Moderate Debt / High Debt.
Analyst Upside %	(Analyst target price minus current price) divided by price, times 100.

Verdict	Score	What it means
Strong Buy	≥ 75	Excellent across technicals + fundamentals
Buy	≥ 60	Strong setup, minor weaknesses
Watch	≥ 45	Mixed signals — monitor closely
Caution	≥ 30	More negatives than positives
Avoid	< 30	Weak technicals and fundamentals

Full Analysis — all data: valuation ratios, margins, EPS, RSI, MACD, support/resistance levels and more.

TIPS

Repeat runs are fast	Data is cached for 24 hours. Running again the same day takes only 2-3 minutes.
Keep laptop awake	A full scan takes 25-35 min. Disable sleep/screensaver before running run_finscan.bat.
Key expiry	If you see 'Access Denied', your key has expired. Contact your FinScan provider to renew.
Internet required	FinScan pulls live data from Yahoo Finance and Finviz. A stable connection is needed.
